

WALID WorldRegistrar provides a ready-made, out-of-the-box solution for global registration. A second-generation domain name registration services platform, WorldRegistrar provides a complete solution for organizations either wishing to enter the domain name registration industry, or for existing organizations that wish to improve their operations and services.

An ensemble of application, database, and middleware components, WorldRegistrar utilizes a browser applet for multilingual input, and enables users to enter and display data in over forty languages. Based on industry-strength, standards-based technologies such as J2EE, XML, Sybase, and BEA WebLogic, WorldRegistrar is capable of handling even the most demanding volumes, and provides a flexible, component-based architecture which can be easily customized to meet your particular business needs. WorldRegistrar is tightly integrated with WALID WorldTools, and is ready to support both Latin and multilingual domain name registrations.

In the month of November alone, VeriSign Global Registry Services reported the registration of over 700,000 multilingual domain names. The world is ready for a truly internationalized Internet.
